

**Professorship in Distributed Data and Knowledge Engineering (open rank)**

Universität Basel

 Bewerbungsfrist: 30.09.2026 Unbefristet Vollzeit Basel (Schweiz) Veröffentlicht am: 24.08.2026

## Professorship in Distributed Data and Knowledge Engineering (open rank)

The University of Basel invites applications for a Professorship in Distributed Data and Knowledge Engineering to join the Department of Mathematics and Computer Science (DMI). This position strengthens the long-term research and teaching profile of the department at the intersection of distributed systems, data science, and machine intelligence, core areas of computer science that are increasingly unified by the central role of data. The new professor will contribute to the department's vision of Trustworthy and Responsible AI, the university-wide research network Responsible Digital Society, and to the University's broader AI initiative.

### Your position

The new professor will enhance the research portfolio of the Department of Mathematics and Computer Science and contribute to teaching at the undergraduate and graduate level. They will be expected to foster interdisciplinary research collaborations across departments and affiliated institutions, thereby strengthening the University of Basel's contributions to the management, processing, and analysis of large and heterogeneous data.

Within the DMI, the new professor will build bridges between distributed systems, data science, and machine intelligence through shared interests in data-intensive systems, distributed infrastructures, and AI-driven data management.

Beyond the department, the position offers synergy with faculties that rely on complex data management (incl. life sciences, digital humanities, and economics) as well as with the Center for Data Analytics (CeDA) and the Center for Scientific Computing (sciCORE).

### Your profile

We seek candidates with an outstanding research record in distributed data
