Cutting-edge Research for a Changing World

Postdoctoral position in Agentic AI in Computational Modeling

JobID: 1059 – 2026/MS 6

Location: Geesthacht

Application deadline: 23 September, 2026

Developing computational models and running computer simulations in science and engineering still requires substantial expert knowledge. Agentic artificial intelligence (AI) offers a great opportunity to automate these demanding tasks to a large extent. We are offering a 2-year position, as soon as possible, as a postdoctoral researcher in the area of agentic AI in computational modeling.

Equal opportunity is an important part of our personnel policy. We would therefore strongly encourage qualified women to apply for the position. In principle, the full

Helmholtz-Zentrum Hereon

The Helmholtz-Zentrum Hereon conducts cutting-edge international research for a changing world: Around 1,000 employees contribute to the tackling of climate change, the sustainable use of the world's coastal systems and the resource-compatible enhancement of the quality of life. From fundamental research to practical applications, the interdisciplinary research spectrum covers a unique range.

Institute of Material Systems Modeling

The Institute of Material Systems Modeling works on methods for
