Head of Thin Film Processing - DTU Nanolab

DTU Nanolab offers a truly unique opportunity, we are seeking a Head of Thin Film Processing, a position that has not been open for more than 20 years.

At DTU Nanolab we operate at the intersection of academia and industry, creating a unique environment for research, innovation and collaboration. Being Head of Thin Film Processing offers a rare chance to step into a central role within one of Denmark's most advanced research and technology facilities.

We are looking for an experienced nanofabrication manager who can lead a team of highly experienced process specialists while advancing state-of-the-art technologies and driving the development and optimization of new process flows.

The role demands strong technological insight, solid leadership capabilities, and the ability to navigate a complex and ambitious professional environment. In return, we offer a position with significant influence, where you will help shape the future of nanotechnology.

Job content

As the Head of Thin Film Processing, you will be overall responsible for processes and tools related to plasma etch and deposition of materials. This includes but is not limited to ICP and RIE etchers, PECVD, LPCVD and PVD as well as ALD and relevant in-line characterization equipment (SEM, AFM, XRD, XPS, ellipsometry). You will interact with and advise both academic and industrial users, you will identify needs and participate in the procurement of new equipment and be responsible for processes and material cross-contamination rules related to new and existing tools. In this role, you will provide strategic and operational leadership for a team of highly experienced process specialists, while contributing as an active member of DTU Nanolab's core management team. We foster a supportive and collaborative working environment with a strong team spirit, and expect you to lead with curiosity, pragmatism, and a solution-oriented mindset.

Furthermore, you will take part in projects that will expand DTU Nanolab's technological capabilities and expertise in close interaction with research groups and other academic and industrial collaborators. Additionally, you will play a significant part in DTU Nanolab's ongoing efforts to strengthen collaboration across the Nordic countries and EU, within for example: EuroNanoLab, Nordic Nanolab Network or EU Chips Joint Undertaking efforts.
