Professor or Associate Professor within the natural sciences, with a focus on Innovation
(4 positions)

Aarhus University is currently expanding its strategic efforts within innovation and entrepreneurship, with the aim of bringing more research into play as concrete societal solutions, spin-outs, and collaborations with established companies. This initiative is closely aligned with Aarhus University's Strategy 2030, where research-based innovation and entrepreneurship constitute a central strategic focus area.

With the aim of expanding AU's capacity to bridge research and innovation, the university leadership has decided to establish a number of new research and innovation positions across the university. These positions are intended to contribute to integrating innovation thinking into the university's culture while at the same time ensuring tangible impact and societal value.

As part of this, the Faculty of Natural Sciences at Aarhus University now invites applications for four permanent positions as Professor or Associate Professor with focus on research-based innovation within the natural sciences. The positions are open across all the scientific disciplines represented at the faculty.

With these positions, we wish to make research-based innovation an integral pillar of our academic activities. Each successful candidate will be affiliated with the department at the faculty that best match their scientific profile, and they will be expected to play a central role in developing research-based innovation activities both locally and faculty-wide. We additionally encourage applications from skilled scientists and experienced innovation professionals currently employed in research and innovation heavy industry or start-ups.

Expected date of accession: April 1st 2027 or as soon as possible thereafter.

Your profile

You are a recognised researcher from an academic institution, industry, start ups or similar. You have a clear vision for how research-based innovation generates impact from natural science research, and experience with translating research into innovative solutions – whether through external collaboration, entrepreneurship, methodological development, technology transfer, co-creation with private or public-sector partners, or other forms of societal use of research-based knowledge. You are motivated by contributing to the strategic development of your department and the Faculty of Natural Sciences, and you are interested in serving as a role model who shows the way for and supports colleagues and students in integrating innovation into their research.
